

# MAXIMIZE YOUR FT8® ASSET VALUE

DOES ONE OF THESE  
SCENARIOS DESCRIBE  
YOUR CURRENT  
SITUATION?

You own a stationary FT8® plant with a low capacity factor, but you need more power elsewhere in your system.

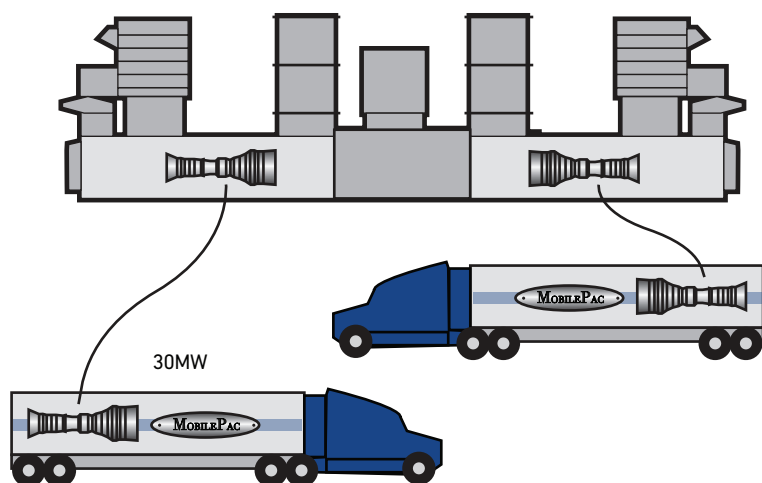

You need the ability to respond more effectively to unplanned outages, storm damage, or other emergencies.

You need a solution for seasonal spikes in power demand.

You are paying high rental power fees.

If you have these or other challenges, Mitsubishi Power Aero can tailor a custom, low-cost solution for you!

One or both gas generators and power turbines are removed "as is" from your stationary gas turbine package and installed into the MOBILEPAC® trailers, giving you one or two blocks of mobile power.

Stationary plant remains in place and ready to return to service when needed.

Today you need to get more value and flexibility from your existing generation assets while the pressure to reduce CAPEX is greater than ever.

For a very low cost we can help you mobilize your valuable GG & PT assets and give you the ability to produce more on-demand power where and when you need it.

#### FEATURE/BENEFITS:

- Much lower cost than a new unit
- No need to decommission your existing plant
- Very fast and inexpensive to swap GGs/PTs
- Maximize value from existing assets
- Eliminate high rental fees
- Added "insurance" for unexpected needs
- Preserve asset value

#### EQUIPMENT/SERVICE OPTIONS:

- Turnkey solutions
- BOP
- EPC
- Training
- Lease additional GGs/PTs

#### ENJOY ALL THE ADVANTAGES OF A STANDARD MOBILEPAC® GAS TURBINE PACKAGE

- No civil work required
- Environmentally compatible
- Optional black start capability
- Dual fuel/dual frequency
- Very compact footprint & Flexible trailer arrangement
- Highway compatible
- Capable of remote operation
- Three point support and structural rigidity to maintain generator alignment
- Ready for emergency power within one day (site ready and previously commissioned)
